

The Aerarius Oath

Inspired by Adeo Ressi's Mensarius Oath,
co-authored by Anton V. N. Radulea,
Founder of Airvolt Inc.

PUBLIC DOMAIN DOCUMENT

I, the undersigned, _____,
affirm this oath and accept the responsibilities it establishes.

I pledge to build and deploy technology in a way that contributes to human well-being, public health, and societal progress.

I commit to acting with integrity, honesty, and accountability, especially when decisions are difficult or when no one is watching.

I will not pursue value through deception, information asymmetry, or the exploitation of partners, investors, or customers.

I will treat data — air quality, environmental impact, operational analytics — as a public trust, ensuring transparency, accuracy, and responsibility in how it is collected, stored, and shared.

I will contribute to the ecosystems I operate in, not extract from them. In every city, every building, every deployment, I will seek to leave the air cleaner, the infrastructure smarter, and the relationships stronger.

I will support founders, teammates, and partners with empathy, clarity, and generosity, understanding that durable innovation emerges from aligned effort and shared purpose.

If I lead, I will lead with humility. If I follow, I will do so with diligence. If I advise, I will do so with care.

I will take responsibility for my decisions, my impact, and my exchanges — understanding that the quality of my work reflects the quality of my character.

In everything I build with Airvolt, I will honor the principle that progress must never come at the cost of people, trust, or integrity.
